## Response to Arguments

Applicant's arguments with respect to claims 12, 14, 16 and 17 have been considered but are most in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 12, 14, 16, 17 and 23-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Jang US Patent 6,770,088 B1 in view of Richter US Patent 5,807,404.

Jang discloses a plurality of different embodiments having catheter/prosthesis assembly (see Fig. 11) comprising a delivery balloon (146), an expandable body (10, see Fig. 9B, 9C & 9D) having a first end (194), a second end (198), a plurality of interconnected cylindrical wall sections (86 & 24) and a plurality of S-shaped connectors (26).

Regarding the S-shaped connectors, the first and second ends of the connectors each emerge laterally from the wall section. Figs. 9B, 9C & 9D clearly disclose the connectors emerging from the lateral surface of each of the cylindrical wall sections. The Examiner interpreted the lateral surface of the cylindrical wall sections as the wall created from the thickness of the stent sections (as shown in Fig. 9D). The independent claims do not have sufficient structural limitations in order to overcome the Examiner's interpretation. In order to overcome the rejection, the Applicant's representative has to add positive structure limitations showing that the two ends of the S-shaped connectors emerge angularly with respect to a

longitudinal axis of the stent or the cylindrical wall sections. However, the embodiment of Figs. 9A-9D of the Jang reference does not disclose S-shaped connectors emerging laterally with respect to a longitudinal axis of the wall section.

The Jang reference and the Richter reference teach a stent having a plurality of connectors emerging laterally with respect to a longitudinal axis of a wall section (see Figs. 6A-7C of the Jang reference and Figs. 1-11 and col. 6, lines 57-60 of the Richter reference) for the purpose of increasing the flexibility of the connectors and in general of the stent.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the embodiment of the Jang reference with another embodiment in the Jang reference or with the s-shaped connector of the Richter reference in order to increase the flexibility of the connectors and in general of the stent.

Regarding the word "angularly" angles are from 0 degrees to 360 degrees, therefore, the S-shaped connectors emerge angularly with respect to a longitudinal axis.

## Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 3738

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the date of this

final action.

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Alvin J Stewart whose telephone number is 571-272-4760. The

examiner can normally be reached on Monday-Friday 7:00AM-5:30PM(1 Friday B-week off).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Corrine McDermott can be reached on 571-272-4754. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
